

INDIVIDUAL STUDENT - CLIENT FEEDBACK

*Thank you for acting as client for **Performance Testing Dashboard team** during their Research & Development Project. Now that the project is nearing completion we would like some feedback that will assist them in their future development.*

It is important that we gain feedback about the aspects of the work that were done well and also suggestions for improvement.

This feedback will be used by the assessors to complete a picture of the student's performance during the project, and by the student to reflect on their performance during the project and in assessing their future development needs.

Could you please complete this and give it to the project supervisor.

THE PROJECT

Could you please comment on the results of the project? To what extent did the student achieve the agreed outcomes?

- Almost requirement is covered and implemented. Some of requirement is missing due to technical solution and lacking time. Overview, they are doing very good. Their start point is nothing (don't have knowledge with Spring/Hibernate/Bootstrap/Performance Testing) but they are research and study very fast.

How well did they go about completing this work?

- Quick learning , Problem solving , Communication skill all is good

What suggestions do you have for improvement?

- Need to be more proactive (more asking and task owner) and professional in work (time management)

How did the student contribute added value or provide professional expertise to your organization?

- They understand requirement, development and testing product with can support us performance test for application

In what ways did the student show initiative in learning about the wider aspects of IT professional practice?

- We using latest technology in the market and agile process with 2 weeks per sprint

Appendix H

PEOPLE SKILLS

In what ways did the student adapt to the situation and develop and maintain professional working relationships appropriate to your organization?

- Friendly, Open mind and good communication not only project activities but also team activities.

In what ways did the student resolve conflicts and manage and deliver to the sponsor's expectations?

- Some misunderstand and requirement understand not clear and they also have a lot communication and open point for resolved problem and issue

OVERALL SKILLS

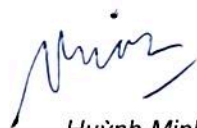

How did the student's skills and abilities develop during the project?

- Good process and communication

What advice would you offer this student for his/her professional development?

- Keep more learning and deep understand more about any technology which you want to use
- More proactive in work. Don't wait for team lead asking "Are you done?" let them know when you finished.
